

GLOBAL ALLIANCE FOR TRADE FACILITATION

WTO Committee on Trade Facilitation Meeting

26 January 2021

Philippe Isler,

Director, Global Alliance for Trade Facilitation

WHO WE ARE

HOST ORGANISATIONS

The world business organization

IN COOPERATION WITH

SUPPORTED BY

Global Affairs Canada

PRIVATE SECTOR PARTNERS INCLUDING

PROJECT SCOPE

WHO?

WHY?

- Recovery from pandemic is dependent on effective vaccination programmes
- Vaccines and ancillaries must cross borders quickly and efficiently to help meet demand and avoid wastage
- Public-private coordination and collaboration is essential to meet objectives

WHERE?

ASEAN region

Cambodia

Laos

- Thailand
- Indonesia
- The PhilippinesVietnam

ASEAN

•

WHAT AND HOW?

Stage 1: In-country diagnostic of TFA needs for vaccines and ancillaries.

Stage 2: **Tabletop testing** to ensure that processes are well understood, efficient and resilient

Stage 3: **Dummy shipments** to make testing of processes as realistic as possible

Shipment Country B

CURRENT STATUS

- Much current effort is focused on vaccine procurement
- Less attention on trade facilitation and full range of concerned products (e.g. syringes, needles, inputs for vaccine manufacture, therapeutic drugs etc.)
- First shipments of vaccines into countries have taken place. High profile media events with emergency border processes
- Number of viable vaccines is increasing and with it regulatory complexity

EMERGING TRADE FACILITATION ISSUES

- Risk of regulatory snap back should issues emerge as a result of current fast-track processes
- Increased trade facilitation urgency due to risk of shortage of vaccine and supplies
- Assess the extent of the challenge in relation to "last mile" delivery
- Assess the impact of rapid increase in volumes of importations in relation to existing infrastructure
- Need inputs into country preparedness from regional manufacturers
- Need to prepare for product recalls if quality issues arise
- Impact on trade facilitation if counterfeiting is identified
- Managing hazardous waste and resulting reverse supply chain

CURRENT / NEXT STEPS

Conduct high level consultations with governments to assess needs and respond to any request for support

Active engagement with private sector companies (logistics providers and manufacturers) to assess current challenges and upcoming concerns

Conduct diagnostic on processes for 'conventional' vaccines and supplies

Establish what are / will be processes for Covid-19 vaccines and supplies

Assist in bridging gaps. Focus on being agile and responsive where need arises.
